

Appln No. To be assigned
Amdt date March 30, 2004

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-18. (Canceled)

19. (Original) An oil or gas well slip system comprising:
a first movable member having an interactive contact surface;

a second movable member having a mating interactive contact surface for slidable engagement with the interactive contact surface of the first movable member, wherein the first and second movable members are each comprised of a first material; and

a second material attached to the interactive contact surface of either the first or the second movable member, wherein the second material is compositionally different from the first material.

20. (Original) The slip system of claim 19, wherein the first movable member is a slip bowl.

21. (Original) The slip system of claim 19, wherein the second movable member is a slip assembly.

22. (Original) The slip system of claim 19, wherein the first movable member is a slip bowl and the second movable member is a slip assembly.

Appln No. To be assigned
Amdt date March 30, 2004

23. (Original) The slip system of claim 19, wherein the second material is compositionally different from the first material to prevent cold welding between the first and second movable members.

24. (Original) The slip system of claim 23, wherein the second material has little or no tendency to dissolve into the atomic structure of the first material.

25. (Original) The slip system of claim 19, wherein the first material is comprised of steel and the second material is comprised of a non-steel metallic material.

26. (Original) The slip system of claim 25, wherein the non-steel metallic material is chosen from the group consisting of copper alloys, bronze alloys, nickel alloys and aluminum alloys.

27. (Original) The slip system of claim 25, wherein the non-steel metallic material has a hardness in a range of 35 to 56 Rockwell Hardness C Scale.

28. (Original) The slip system of claim 22, wherein the slip assembly comprises a plurality of fingers that engage a plurality of grooves in the slip bowl to prevent a lateral movement of the slip assembly with respect to the slip bowl while allowing for a rotational movement of the slip assembly with respect to the slip bowl.

29. (Original) The slip system of claim 25, wherein the non-steel metallic material has a thickness in a range of 1/4 to 1/16 inches.

30. (Original) The slip system of claim 25, wherein the non-steel metallic material is a coating that is attached to the

Appln No. To be assigned
Amdt date March 30, 2004

interactive contact surface of either the first or the second movable member.

31. (Original) The slip system of claim 22, wherein the second material is a coating that is applied to the interactive contact surface of either the slip bowl or the slip assembly.

32. (Original) The slip system of claim 25, wherein the non-steel metallic material is welded to the interactive contact surface of either the first or the second movable member.

33. (Original) The slip system of claim 22, wherein the second material is welded to the interactive contact surface of either the slip bowl or the slip assembly.

34. (Original) The slip system of claim 25, wherein the non-steel metallic material is attached to the interactive contact surface of either the first or the second movable member by a mechanical fastening means.

35. (Original) The slip system of claim 22, wherein the second material is attached to the interactive contact surface of either the slip bowl or the slip assembly by a mechanical fastening means.

36. (Original) A method of reducing cold welding between a first movable member and a second movable member in an oil or gas well slip system comprising:

providing a first movable member comprising an interactive contact surface;

providing a second movable member comprising a mating interactive contact surface for slidable engagement with the interactive contact surface of the first movable member, wherein the first and second movable members are each comprised of a first material; and

Appln No. To be assigned
Amdt date March 30, 2004

attaching a second material to the interactive contact surface of either the first or the second movable member, wherein the second material is compositionally different from the first material.

37. (Original) The method of claim 36, wherein the first movable member is a slip bowl.

38. (Original) The method of claim 36, wherein the second movable member is a slip assembly.

39. (Original) The method of claim 36, wherein the first movable member is a slip bowl and the second movable member is a slip assembly.

40. (Original) The method of claim 36, wherein the second material is compositionally different from the first material to prevent cold welding between the first and second movable members.

41. (Original) The method of claim 40, wherein the second material has little or no tendency to dissolve into the atomic structure of the first material.

42. (Original) The method of claim 36, wherein the first material is comprised of steel and the second material is comprised of a non-steel metallic material.

43. (Original) The method of claim 42, wherein the non-steel metallic material is chosen from the group consisting of copper alloys, bronze alloys, nickel alloys and aluminum alloys.

44. (Original) The method of claim 42, wherein the non-steel metallic material has a hardness in a range of 35 to 56 Rockwell Hardness C Scale.

Appln No. To be assigned
Amdt date March 30, 2004

45. (Original) The method of claim 39, wherein the slip assembly comprises a plurality of fingers that engage a plurality of grooves in the slip bowl to prevent a lateral movement of the slip assembly with respect to the slip bowl while allowing for a rotational movement of the slip assembly with respect to the slip bowl.

46. (Original) The method of claim 42, wherein the non-steel metallic material has a thickness in a range of 1/4 to 1/16 inches.

47. (Original) The method of claim 42, wherein the non-steel metallic material is a coating that is attached to the interactive contact surface of either the first or the second movable member.

48. (Original) The method of claim 39, wherein the second material is a coating that is applied to the interactive contact surface of either the slip bowl or the slip assembly.

49. (Original) The method of claim 42, wherein the non-steel metallic material is welded to the interactive contact surface of either the first or the second movable member.

50. (Original) The method of claim 39, wherein the second material is welded to the interactive contact surface of either the slip bowl or the slip assembly.

51. (Original) The method of claim 42, wherein the non-steel metallic material is attached to the interactive contact surface of either the first or the second movable member by a mechanical fastening means.

52. (Original) The method of claim 39, wherein the second material is attached to the interactive contact surface of

Appln No. To be assigned
